Summary

Computer Science graduate from Virginia Tech with a strong foundation in full-stack development, systems engineering, and infrastructure. Hands-on experience building scalable applications, conducting security research, and optimizing system reliability. Eager to leverage technical versatility and problem-solving skills in a dynamic software engineering role.

Education

Virginia Tech

B.S. Computer Science, GPA: 3.37/4.0,

Blacksburg, VA

May 2026

Skills

Languages: Python, JavaScript, TypeScript, Java, C, C++, SQL, Bash

Web & Frameworks: React, Three.js, Vite, Django, Node.js, REST APIs

Infrastructure: Linux, Docker, Proxmox, OPNsense, NixOS, Nginx, PostgreSQL, Git, CI/CD, SSH

Experience

Systems Administrator / Infrastructure Engineer

January 2019 – December 2023

Independent Systems Administration

Proxmox, Linux, NixOS, Docker, OPNsense

- Administered and maintained a Linux infrastructure environment spanning Proxmox virtual machines, NixOS systems, and Docker-based services.
- Configured and managed network infrastructure using OPNsense, including firewall rules, port forwarding, DNS, routing, and service accessibility.
- Develop custom scripts, plugins, and server-side software to automate administrative tasks, service management, and system maintenance.
- Managed remote administration through SSH, access controls, service configuration, and secure network practices.
- Deployed and maintain containerized services using Docker, including networking, persistent storage, configuration, and service dependencies.
- Troubleshooted system, application, and network issues using logs, resource utilization, configuration analysis, and command-line tooling.
- Performed software upgrades, configuration changes, backups, and recovery procedures while maintaining service availability.

Projects

Garage64: Custom Entity Model Studio • GitHub

August 2025 – Present

React, Three.js, Django, SQLite, Docker

- Developing a self-hosted web application for creating custom Minecraft vehicle models and texture packs using the OptiFine Custom Entity Model (CEM) format.
- Building an interactive React and Three.js 3D editor that supports real-time vehicle customization through modular part swapping and texture painting.
- Implementing a Django REST API for managing entity metadata, asset configurations, and project persistence.
- Creating an automated export pipeline for generating `.jem` and `.jpm` asset files from user-created models.
- Containerizing the application with Docker Compose to streamline local development and deployment.

personal-blog: Full-Stack Blogging Platform • Website

February 2026 – April 2026

React, Vite, Django REST Framework, PostgreSQL, Docker, Nginx

- Built a blogging platform with a Django REST API, React + Vite frontend, Docker Compose setup, and Nginx reverse proxy.
- Added JWT-authenticated admin access, draft and publish workflows, cover image uploads, and live markdown previews with syntax highlighting.

CHUD: Catastrophic Harmful Update Detection • GitHub

January 2026 – April 2026

Python, PyTorch, LoRA, Llama-2-7b, Llama-Guard-3-8b, Unsloth

Team of 4 (CS Capstone)

- Tested the LoX defense (Perin et al., COLM 2025) against an iterative LoRA fine-tuning attack on Llama-2-7b using benign GSM8k and adversarial BeaverTails samples.
- Built an Attack Success Rate (ASR) evaluation pipeline with Llama-Guard-3-8b as the judge model and ran 30+ experiments across attack mixes and learning rates.
- Found that LoX lowered ASR from 91–96% to 37–63% under direct harmful fine-tuning, but an iterative mixed-data attack raised ASR back to 89%.
- Set up x86-64 and aarch64 VT GPU cluster environments for the team and ran QLoRA fine-tuning evaluations for the final analysis.

Leadership & Community

Team Lead, Database Management Systems

May 2025 – August 2025

- Led a 3-person team through schema design and SQL development, then integrated the team's work into the final submission.

Team Lead, Intermediate Software Design

January 2025 – April 2025

- Led a 5-person team through requirements gathering, sprint planning, code reviews, and final project delivery.

Garage32 (Community Project)

March 2020 – December 2021

- Led development and distribution of a graphical asset pack for the Minecraft community, reaching **600+ downloads**; promotional content earned **30K+ likes** on a single TikTok post.
